A (Normal-form) game has:

- 1) A list of participants, or players
- 2) For each player, a list of strategies
- 3) For each array of strategies, one for each player, a list of payoffs that the players receive

Dominant strategy

Game Theory .net

A strategy is dominant if, **regardless of what any other players do, the strategy earns a player a larger payoff than any other**. Hence, a strategy is dominant if it is always better than any other strategy, for any profile of other players' actions.

Dominated strategy

Game Theory .net

A strategy is dominated if, **regardless of what any other players do, the strategy earns a player a smaller payoff than some other strategy**. Hence, a strategy is dominated if it is always better to play some other strategy, regardless of what opponents may do.
