

## Barick Chung

### Employment:

2014-present Senior Lecturer, Department of Economics, CUSZ – Shenzhen.  
2012-2014 Lecturer, School of Economics and Finance, University of Hong Kong.  
2006-2012 Instructor, Department of Economics, CUHK – Hong Kong.

### Education:

2003-2007 Ph.D. (Business) Indiana University – Bloomington.  
1987-1991 BS.Sc. (Economics) Chinese University of Hong Kong – Hong Kong.

### Research paper:

Chung, Barick, "Two Level Price Discrimination and Vertical Relationship" (March 05, 2012). Available at SSRN: <http://ssrn.com/abstract=1997070>.

Mankiw, Gregory, *Essentials of Economics*, 2012, p. 242  
"various measures of cost"

Output	Total cost	Fixed cost	Variable cost	Average fixed cost	Average variable cost	Average total cost	Marginal cost
0	\$3	\$3	\$0	–	–	–	–
1	3.3	3	0.3	\$3	\$0.3	\$3.3	\$0.3
2	3.8	3	0.8	1.5	0.4	1.9	0.5
3	4.5	3	1.5	1	0.5	1.5	0.7
4	5.4	3	2.4	0.75	0.6	1.35	0.9
5	6.5	3	3.5	0.6	0.7	1.3	1.1
6	7.8	3	4.8	0.5	0.8	1.3	1.3
7	9.3	3	6.3	0.43	0.9	1.33	1.5
8	11	3	8.0	0.38	1	1.38	1.7
9	12	3	9.9	0.33	1.1	1.43	1.9
10	15	3	12.0	0.3	1.2	1.5	2.1

Mankiw, Gregory, 2012, *Essentials of Economics*, p. 239:

**Production function** is the relationship between quantity of inputs used to make a good and the quantity of output of that good.

Factory	Workers	Output (cookies)	Marginal product	Cost (factory) \$10	Cost (workers) @ \$10	Total cost
1	0	0		\$0	\$0	\$0
1	1	50	50	30	10	40
1	2	90	40	30	20	50
1	3	120	30	30	30	60
1	4	140	20	30	40	70
1	5	150	10	30	50	80
1	6	155	5	30	60	90

7

\$10 for 50 pieces. So, each piece costs:  
 $\$10 / 50 = 20\text{¢}$

Pindyck and Rubinfeld, pp.206-7:

**Law of diminishing marginal returns** (Law of diminishing marginal products): Principle that as the use of an input increases with other inputs fixed, the resulting additions to output will eventually decrease.

## Assumption

---

---

Pindyck and Rubinfeld, p. 243:

If a firm rents an equipment:  
User cost of capital = rent

If a firm purchases the equipment:  
User cost of capital = Economic Depreciation + Interest

For example, a firm purchases an airplane, which can be used for 30 years. The price of the airplane is \$150M and the interest rate is 10%.

Depreciation rate is  $\$150\text{M} / 30 \text{ years} = \$5\text{M per year}$ .

In the first year, user cost of capital =  $\$5\text{M} + 10\% \times \$150\text{M}$

In the second year, user cost of capital =  $\$5\text{M} + 10\% \times \$145\text{M} \dots$

2:46:39

13

~~X~~ Price = 15M

~~X~~ rent = 0.5M

V

20M

The end
